To whom it concerns:

I am writing per your request and in regards to The Blaster Chemical Companies' aerosol product PB Penetrating Catalyst.

We do not recognize an absolute shelf life to this product. Our testing has shown that the product remains usable as long as the integrity of the aerosol container remains intact. This is to say that if there is still propellant in the can (Does the can continue to dispense?) the product will demonstrate the same performance as new. We have seen cans of this product over thirty years old that conform to our current quality specifications. If for some reason the propellant has been expelled and liquid product remains in the container, The Blaster Chemical Companies will replace it.

Enclosed with this letter you are sure to find a Material Safety Data Sheet for part number 16-PB. If I can be of further assistance, please contact me.

Very truly yours:

Thomas Hrabak
Manufacturing Engineer
